

Abin Jils

MERN Full Stack Developer

abinjills0904@gmail.com | +91 7012963729 | GitHub | LinkedIn | Portfolio

PROFILE SUMMARY

MERN Full Stack Developer with a portfolio of four production-grade applications—a real-time collaboration platform, two e-commerce systems, and a startup-investor marketplace—built with React.js, TypeScript, Node.js, Express.js, and MongoDB. Delivered measurable results including **30%** faster API responses, **25%** reduced load times, and **20%** fewer redundant requests through indexing, caching, and endpoint consolidation. Comfortable owning features end-to-end: REST API design, JWT/RBAC authentication, responsive UI, and cloud deployment on Vercel and Render. Currently interning at Bridgeon, building production features in an Agile team and integrating Generative AI into live applications.

TECHNICAL SKILLS

- **Frontend:** React.js, TypeScript, JavaScript, HTML5, CSS3, Accessibility)
- **Backend:** Node.js, Express.js, REST APIs
- **Database:** MongoDB, Mongoose, SQL
- **Authentication:** JWT, RBAC, Session Management
- **State Management:** Context API, Redux Basics
- **Testing & Audit:** Jest, Lighthouse (Performance, SEO, Accessibility)
- **Deployment:** Vercel, Render, Docker (Basics), AWS (Basics)
- **Tools:** Git, GitHub, Postman, CI/CD Basics
- **Concepts:** OOP, MVC, Debugging, Clean Code
- **AI & GenAI:** Gemini API, Grok API, Cursor, Claude, Generative AI Integration

PROJECTS

SYNQ Collaboration Platform (Ongoing) | MERN Stack | Live Demo

- Architected an all-in-one collaboration platform with real-time chat, channels, task boards, and video rooms for distributed teams.
- Implemented Socket.IO-based messaging with online status, typing indicators, and per-channel notifications to keep teams in sync.
- Designed and exposed REST APIs for workspaces, members, tasks, and permissions, following an MVC-style service/controller structure.
- Built secure auth with JWT, refresh tokens, and role-based access (owner, admin, member) for workspace-level access control.
- Created a responsive dashboard UI with reusable React components for channels, task columns, and meeting tiles optimized for desktop and mobile.
- Added activity logs and audit trails so teams can track message edits, task status changes, and membership updates over time.
- Deployed on Vercel; validated performance and accessibility using Lighthouse audits.

Avren E-Commerce Platform (Ongoing) | MERN Stack | Live Demo

- Developed a clothing e-commerce app with product catalog, filters, cart, checkout flow, and order management for both guests and logged-in users.
- Built an admin dashboard for product CRUD, inventory levels, order overview, and status updates, using protected admin routes.
- Implemented JWT-based authentication with password hashing, protected APIs, and separate customer/admin roles.
- Designed a payment-ready backend abstraction (order creation, status, amount) that can plug into Stripe/Razorpay with minimal changes.
- Optimized frontend performance with code-splitting, memoization, and efficient API usage, improving core page load and navigation times.
- Added form validation, error states, and toast feedback to make cart and checkout flows robust against invalid or partial input.
- Deployed on Vercel (frontend) and Render (backend); used Lighthouse to audit and improve performance scores.

Venture Capital Platform | MERN Stack | Live Demo

- Built a startup-investor networking platform with separate dashboards for founders and investors, including profiles, deal pipelines, and pitch tracking.

- Designed REST APIs for startups, investors, applications, and deals, improving API response speed by **30%** through efficient querying and indexing.
- Reduced API requests by **20%** by batching data fetches, adding combined endpoints, and caching stable entities on the frontend.
- Integrated Gemini API to power AI features including pitch-summary generation and startup-investor matching suggestions.
- Implemented status-based workflows (applied, under review, shortlisted, rejected) so investors can manage deals like a lightweight CRM.
- Added search and filters (sector, funding stage, ticket size) to help investors quickly discover relevant startups.
- Deployed on Vercel and Render; ran Lighthouse audits to ensure acceptable performance and SEO scores at launch.

Rivus Car Rental Platform | MERN Stack | Live Demo

- Developed a full-stack car rental platform supporting vehicle listings, detailed pages, booking flow, and user account management.
- Implemented JWT authentication, protected routes, and role-based access control so admins manage vehicles and bookings while customers manage their own reservations.
- Optimized MongoDB queries, asset loading, and API response patterns, reducing overall application load time by **25%**.
- Built a responsive UI using modern CSS and component-based design, ensuring consistent UX on mobile, tablet, and desktop.
- Added admin tooling for booking status updates, vehicle management, and basic analytics (booking counts, revenue overview).
- Improved error handling and empty states across the app to avoid broken flows when data or network issues occur.

EXPERIENCE

Bridgeon | MERN Stack Developer Intern

June 2025 – Present

- Built end-to-end features using React.js, TypeScript, Node.js, Express.js, and MongoDB in an Agile environment.
- Improved REST API performance by **20–30%** through better indexing, pagination, and reducing N+1 style queries.
- Reduced redundant API requests by **20%** by consolidating endpoints and caching common data on the client.
- Collaborated closely with designers and senior engineers to refine UX, code structure, and review pull requests.
- Integrated Generative AI features into internal tools including content generation and text summarization using large language model APIs.

AI & AUTOMATION

- Integrated Gemini API and Grok API into production web applications for content generation, summarization, and intelligent user interactions.
- Developed a virtual simulation platform for the healthcare sector using Grok API, enabling AI-driven medical training workflows for an internal tool (confidential).
- Built AI-assisted development workflows using Cursor and Claude to accelerate feature delivery and improve code quality.

EDUCATION

Alphonsa Arts and Science College

2022 – 2025

Bachelor of Computer Applications

Relevant Coursework: Data Structures, Database Management Systems, Object-Oriented Programming, Web Technologies, Software Engineering, Computer Networks

Final Year Project: Built a full-stack service booking platform with an AI-powered chatbot for automated booking assistance and user query resolution, using web technologies and third-party AI APIs.

CERTIFICATIONS

- MERN Stack Development – LetsUpgrade (Node.js, Express.js, MongoDB, React.js)
- React and React Native Development – LetsUpgrade (Component architecture, hooks, mobile development)
- Git and GitHub Version Control – LetsUpgrade (Branching, pull requests, collaborative workflows)
